ExxonMobil is looking for outstanding candidates for the position of...

Contact Engineer

Monitor performance of process units to identify any gap vs fixed targets and suggest relevant corrective actions. Prepare and coordinate test runs execution to determine ultimate capacity of process units and establish most adequate operating conditions for various types of raw material. Develop technical specifications for minor projects and/or plant modifications. Cooperate with unit supervisor to: develop/review operating procedures; carry out risk analyses as required; define proper lab check program to control product quality. Cooperate with 'Operation Planning' function to: improve operations profitability; evaluate feasibility of new operations and establish basis for their economic evaluation.

Job Requirements:

- Mechanical /Chemical/Energy Engineering degree
- Excellent university curriculum
- Fluency in English
- Genuine interest and orientation to work in an international context
- Full domestic / international mobility
- Work/study experience abroad an asset
- Computer skills
